dDAGreverse   *Function to reverse the edge direction of a direct acyclic graph (DAG)*

Description

dDAGreverse is supposed to reverse the edge direction of a direct acyclic graph (DAG; an ontology). The return graph remains all attributes associated on nodes and edges.

Usage

```
dDAGreverse(g)
```

Arguments

g   an object of class "igraph" or "graphNEL"

Value

- gr: a graph being reversed, an object of class "igraph" or "graphNEL"

Note

See Also

dDAGreverse

Examples

```
# 1) load HPPA as igraph object
ig.HPPA <-dRDataLoader(RData='ig.HPPA')
g <- ig.HPPA

# 2) the graph with reverse edge direction
gr <- dDAGreverse(g)
gr
```
